

IoU = Intersection / Union

$$\text{IoU} = \frac{\text{Area of Overlap (Intersection)}}{\text{Area of Union}}$$
$$\text{Union} = \text{Area}(\text{GT}) + \text{Area}(\text{Pred}) - \text{Intersection}$$

examples

IoU = 1.0 Perfect overlap Boxes identical

IoU ≈ 0.7 Good detection Mostly overlapping

IoU = 0.5 Typical threshold for "correct"

IoU = 0.0 No overlap Wrong detection
